### **How Writing By Hand Makes Kids Smarter**

*Younger Americans are typing or texting more and writing less, even in school — and that's a problem when it comes to brain development*

With the **ubiquity** of keyboards large and small, neither children nor adults need to write much of anything by hand. That's a big problem, says Gwendolyn Bounds in *The Wall Street Journal*. Study after study suggests that handwriting is important for brain development and cognition — helping kids hone fine motor skills and learn to express and generate ideas. Yet the time devoted to teaching penmanship in most grade schools has shrunk to just one hour a week. Is it time to break out the legal pad? Here's a look at how the brain and penmanship interact:

#### **Writing by hand can get ideas out faster**

University of Wisconsin psychologist Virginia Berninger tested students in grades 2, 4, and 6, and found that they not only wrote faster by hand than by keyboard — but they also generated more ideas when composing essays in longhand. In other research, Berninger shows that the sequential finger movements required to write by hand activate brain regions involved with thought, language, and short-term memory.

#### **Writing increases neural activity**

A recent Indiana University study had one group of children practice printing letters by hand while a second group just looked at examples of A's, B's, and C's. Then, both groups of kids entered a functional MRI (disguised as a "spaceship") that scanned their brains as the researchers showed them letters. The neural activity in the first group was far more advanced and "adult-like," researchers found.

#### **Good handwriting makes you seem smarter**

Handwriting also affects other people's perceptions of adults and children. Several studies have shown that the same **mediocre** essay will score much higher if written with good penmanship and much lower if written out in poor handwriting, says Vanderbilt University education professor Steve Graham. "There is a reader effect that is **insidious**," he says. "People judge the quality of your ideas based on your handwriting." And the consequences are real: On standardized tests with handwritten sections, like the SAT, an essay deemed illegible gets a big zero.

#### **This isn't only an English-language phenomenon**

Chinese and Japanese youths are suffering from "character amnesia," says AFP's Judith Evans. They can't remember how to create letters, thanks to computers and text messaging. In China, the problem is so prevalent, there's a word for it: "Tibiwangzi", or "take pen, forget character." "It's like you're forgetting your culture," says Zeng Ming, 22. So closely are Chinese writing and reading linked in the brain, says Hong Kong University linguist Siok Wai Ting, that China's reading ability as a nation could suffer.

#### **New technology is part of the solution**

New touch-screen phones and tablets, like the iPhone and iPad, are providing a countervailing force, translating handwriting into digital letter forms or making writing practice fun (a \$1.99 iPhone app called "abc PocketPhonics" rewards kids with "cheering

pencils"). In Japan, an iPhone game called kanji kentei — a character quiz with 12 levels — has become a hit with all age groups.

Heather Horn in *The Atlantic Wire* says that while all this research is fascinating, it mostly shows that "scientists are finally beginning to explore what writers have long suspected." She notes a 1985 article in the *Paris Review* in which the interviewer asks novelist Robert Stone if he mostly types his manuscripts. His reply: "Yes, until something becomes **elusive**. Then I write in longhand in order to be precise. On a typewriter or word processor you can rush something that shouldn't be rushed — you can lose nuance, richness, **lucidity**. The pen compels lucidity."

Helpful Vocabulary:

**Ubiquity:** the state of being everywhere

**Mediocre:** ordinary; not special

**Insidious:** intended to entrap; sneaky

**Elusive:** hard to define

**Lucidity:** clarity; clear.

Possible WN topics:

- Do you think that writing by hand is good exercise for your brain? Why? Why not?
- Do you agree that writing by hand might create different thinking than those thoughts you generate when you type?
- Reflect on whether you are writing enough in your Writer's Notebook.
